Excerpt: .x and y may be written y = r (2) Thus, when the values of a variable x run over an arithmetical progression (of first term 0) while the corresponding values of a variable y run over a geometrical progression (of first term 1), the relation between the variables may be written in either of the forms (1) or (2) above. Equation (2) is called an exponential equation and y is said to be an exponential function of x, while in (1) x is said to be a logarithmic function of y. The student has frequently been called upon in mathematics to express relations between variables in two different or inverse forms, analogous to the two forms y--rx and x = log, y. For example, he has written either y = x2 or: x = /y and either y = x /2 x = J/2/ The graph of a function is of course the same whether the equation be solved for x or solved for y. 130. The student is required to construct the curves described in the following exercises by the method of 129. The inch, or 2 cm., may be adopted as the unit of measure; the curves should be drawn on plain paper within the interval from x =- 2 to x = + 2. If tangents be drawn to the curves at x =--2, --1, 0, 1, 2, it will be noted, as nearly as can be determined by experiment, that the...
