Not illustrated. 1918 Excerpt: . . . low-voltage circuit is disconnected--and since any difference of potential between line and ground is shared in proportion to these capacities, a transient electrical disturbance on the line may puncture the insulation between low-voltage winding and case, this insulation not being designed to withstand high voltages. Mention should also be made here of the practice which is sometimes followed of using a common ground for a lightning arrester, a transformer core and case, and a low-voltage circuit. This is a good arrangement as far as the insulation of the transformer is concerned, but in the event of a discharge over the arrester, a high potential may be set up between low-voltage circuit and ground which may be a source of danger to a person touching fixtures at the time the discharge occurs. As shown more fully under Section III, 7, following, it is quite necessary to safety...
