RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 128 pages. Dimensions: 9.7in. x 7.4in. x 0.3in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1908 Excerpt: . . . to the stem, yellow, turning slightly ferruginous. The stem is stuffed, somewhat hollow, fibrillose, yellow, ferruginous at the base. These plants are of a showy yellow, and are frequently found in our woods on decayed logs. They are found in July and August. *Flaminula carbonaria*. Fr. The Viscid *Flammula*. *Carbonaria* is so called because it is found on charcoal or burned earth. The pileus is quite fleshy, tawny-yellow, at first convex, then becoming plane, even, thin, viscid, margin of the cap at first inrolled, flesh yellow. The gills are firmly attached to the stem, clay-colored or brown, moderately close. The stem is stuffed or nearly hollow, slender, rigid, squamulose, pallid, quite short. The spores are ferruginous-brown, elliptical, 7x3.51. I have found this species quite frequently where an old stump had been burned out. It is gregarious. I have only found it from September to November but the specimens in Figure 230 were sent to me in May, from Boston. They were found in great abundance in Purgatory Swamp, where the grass and vegetation had been burned away. *Flammula fusca*. Batsch. *Fusca* means a spindle; so called from the spindle-shaped stem. The pileus is compact, convex, then expanded, even, rather viscid, reddish-tan, flesh yellowish. The gills are somewhat decurrent, pallid yellow, becoming ferruginous. The stem is stuffed, firm, colored like the pileus, fibrillose, striate, attenuated and somewhat fusiform, rooting. The spores are broadly elliptical, 10x4.1. Found on well-decayed logs or on ground made up largely...
