Exercises in practical physics for schools of science Volume 2

By Sir Richard Gregory

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 42 pages. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1899 Excerpt: . . . are thus found to vary directly as the square roots of the stretching loads. The student should carefully consider and satisfy himself that this deduction is correct. b) Place a wire on the monochord and stretch it by a known weight. Find the length required to give a note in unison with the tuning fork of which the actual frequency is known. Weigh a measured length of the wire, and find the mass (,) of 1 cm. Express the stretching weight in dynes (7), and hence test the following relationship. 1 1 IT Number of vibrations per second --7 V--2 m xA dyne is the force which, acting upon a gram for one second, generates a velocity of one centimetre per second. The weight of 1 gram is g dynes, and of m grams is mg dynes. The value of g may be taken as 981 cm. per second. (See Part...
