The larger discs seen in the illustration are of thin copper, placed between each spark unit to radiate away the heat caused by the sparks. The units should be inspected about once in six weeks, as the sparks are likely to wear away the inner edges of the mica insulating washers. Quenched spark gaps, made on the above lines, can be used with induction coil and battery excitation, but will only give a musical note if the coil is fitted with a rapid make and break; otherwise the spark will be of a hoarse sound which is not heard well in the receivers. The Telefunken Co. have designed a rapid make and break for their induction coils, used in the smaller stand-by transmitting outfits. The quenched spark will not work well on alternating current supply of ordinary low frequencies, where the transmitter...
