Orris root.4 Precipitated chalk.1 ounce. Oil of wintergreen. 15 minims.Mix. When it is thought advisable to employ an additional abrasive, in a dentifrice composition, particularly if it be of so positive an action as pumice, care should be taken to prevent its indiscriminate use by those liable to be harmed by it, and in no case should it be employed for constant daily use. The cleansing effect of orange wood, and similar substances, largely rests, after eliminating the personal equation, upon the abrasive function performed by the silica always present in the wood-fibre cell. OXIDIZING AGENTS USED IN DENTIFRICE. Chlorate of potassium: We mention this substance first because popularly regarded as an oxidizing addition to dentifrices, washes, pastes, etc., it can under no conditions present in the human subject yield free oxygen. It is eliminated unchanged, principally through saliva and renal excretion. Hobart Hare, in the Standard Dispensatory, describes it as being, after the cyanide, the most poisonous salt of potassium. Its continued use, even in small amounts, would be an active cause of stomach derangement, and would unquestionably seriously effect patients suffering from any form of kidney disease. The particular value of potassium chlorate is found in its antiseptic and germicidal action. It is a stimulant, in fact an irritant to mucous membranes, markedly stimulating the flow of saliva, and is unquestionably of service in various forms of stomatitis. Prof. P. G. Unna, of Hamburg,...
